

Planting Mix 1: Coastal Dune Scrub

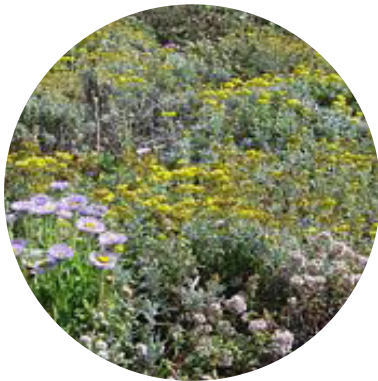

Image credit: <https://calscape.org>
Gartenflo, 2005

Planting mix precedents

Beach Strawberry

California Sea Pink

Coast Buckwheat

Yarrow

Plant species

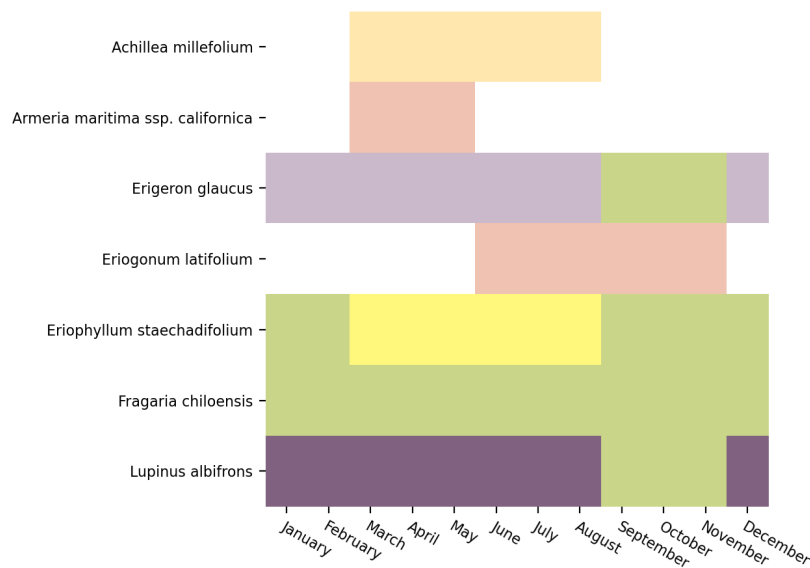

Planting mix inspiration:

“The dune scrub community is found on inland dunes landward of the foredune community. It is characterized by densely packed shrubs interspersed with scattered areas of grasses, wildflowers, and open sand.” - www.nps.gov

Our design response to test:

- Select plant species that would naturally grow in this community that are native to San Francisco.
- Cluster mid-size shrub planting together and cluster lower level planting together so that variation massing/ height variation is clear.

Anticipated plant colors during year:

Plant list:

Groundcover Layer (50%)

Beach Strawberry (*Fragaria chiloensis*)

Filler Species, broadcast as seed (5-10%)

Yarrow (*Achillea millefolium*)

Seasonal Layer (25-40%)

California Sea Pink (*Armeria maritima v californica*)

Seaside Daisy (*Erigeron glaucus*)

Structural Layer (10-15%)

Coast Buckwheat (*Eriogonum latifolium*)

Silver Lupine (*Lupinus albifrons*)

Seaside Woolly Sunflower (*Eriophyllum staechadifolium*)
